

How to setup OpenVPN connection on iPad

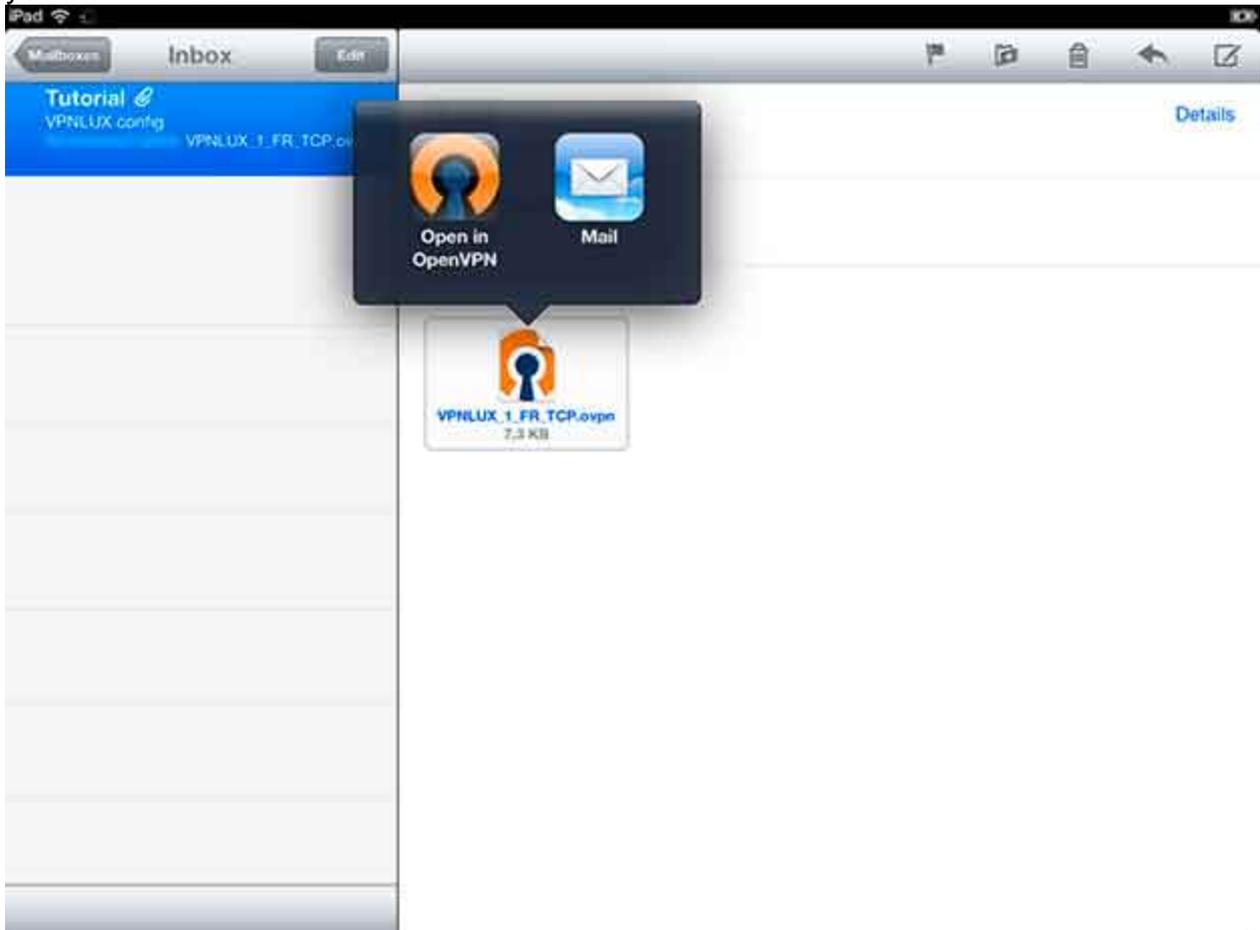

STEP BY STEP GUIDE

HOW TO CREATE OPENVPN CONNECTION

STEP 1. Install **OpenVPN Connect** app.

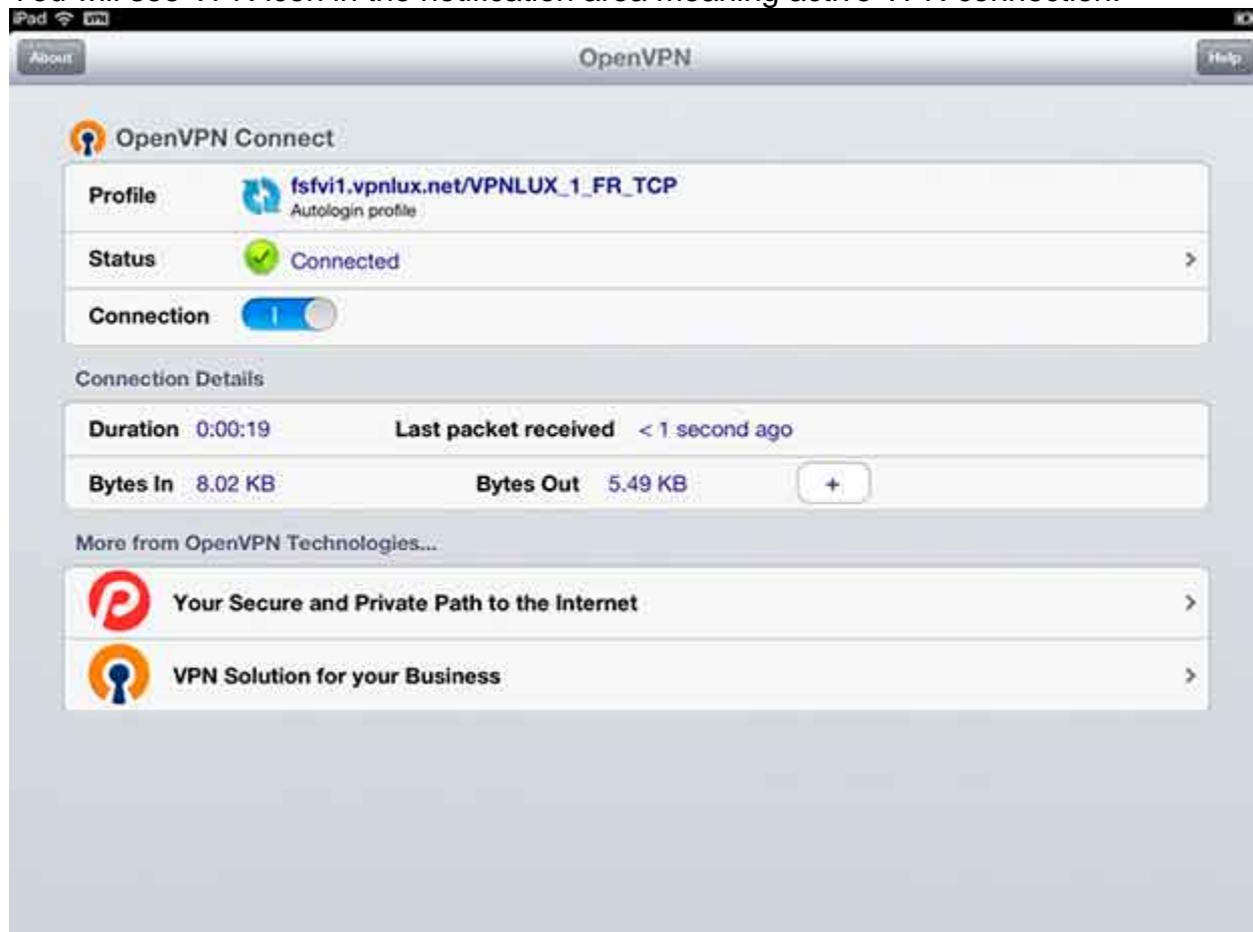

STEP 2*. **Download** the config file from control panel and open it with installed app. If you can't download it with your browser, we recommend you to use Dropbox service or email for launching config file - you will need add config file to attachment and send it to yourself in that case.

STEP 3. Import your configuration file (look for the "+" icon).

STEP 4. OpenVPN iOS configuration now is complete. Toggle switch **ON** to connect. You will see VPN icon in the notification area meaning active VPN connection.

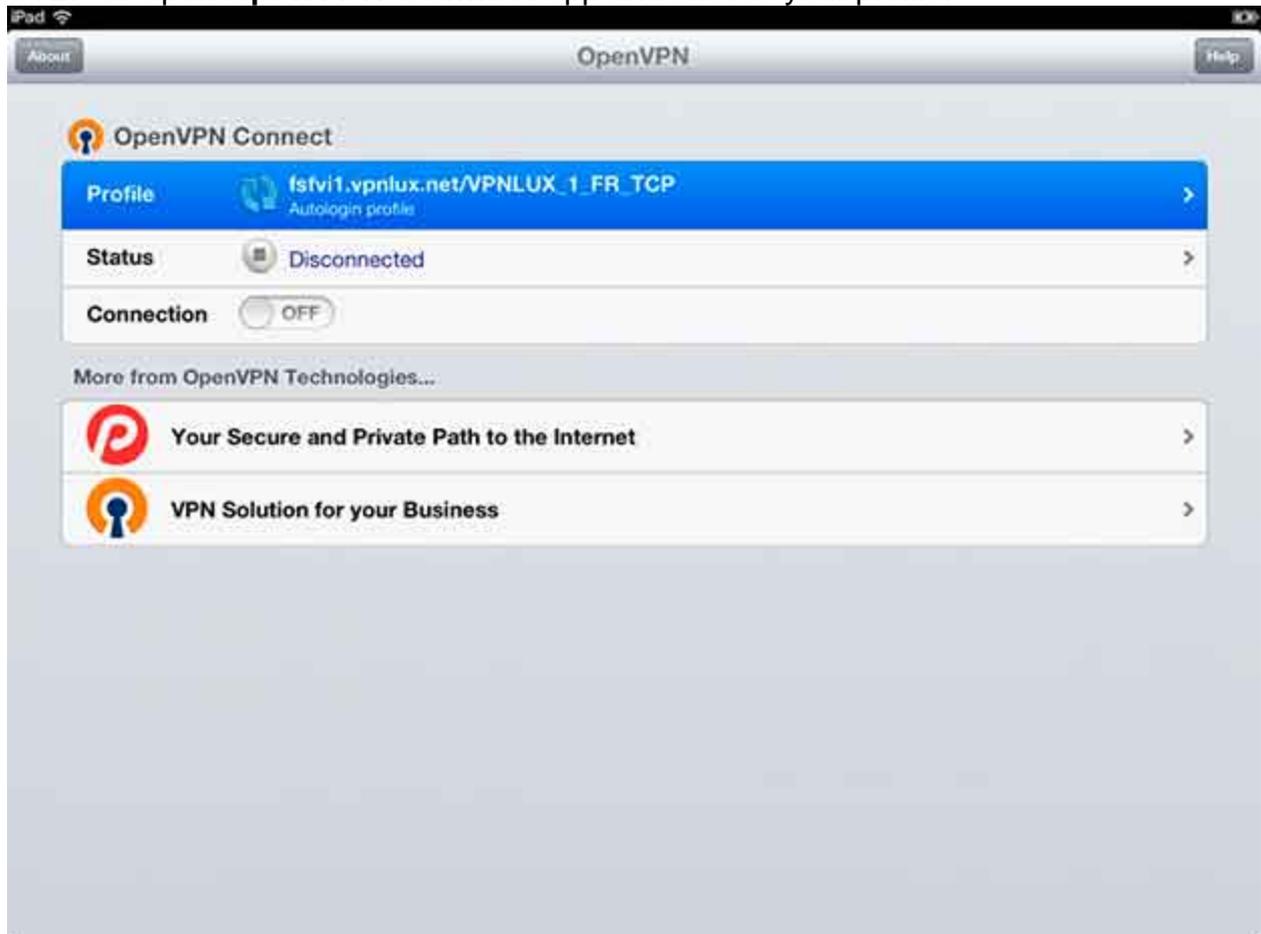

* Get [VPN access](#) first.

Our packages include three types of VPN: L2TP VPN, PPTP VPN and OpenVPN. Visit [VPN technology](#) page to view their specifications.

HOW TO DELETE OPENVPN CONNECTION

STEP 5. Open **OpenVPN Connect** app and choose your profile.

STEP 6. Tap "-" icon on the left, then the red **Delete** button on the right and confirm it.
