# Setup OpenVPN on Mac OS with Tunnelblick

English version

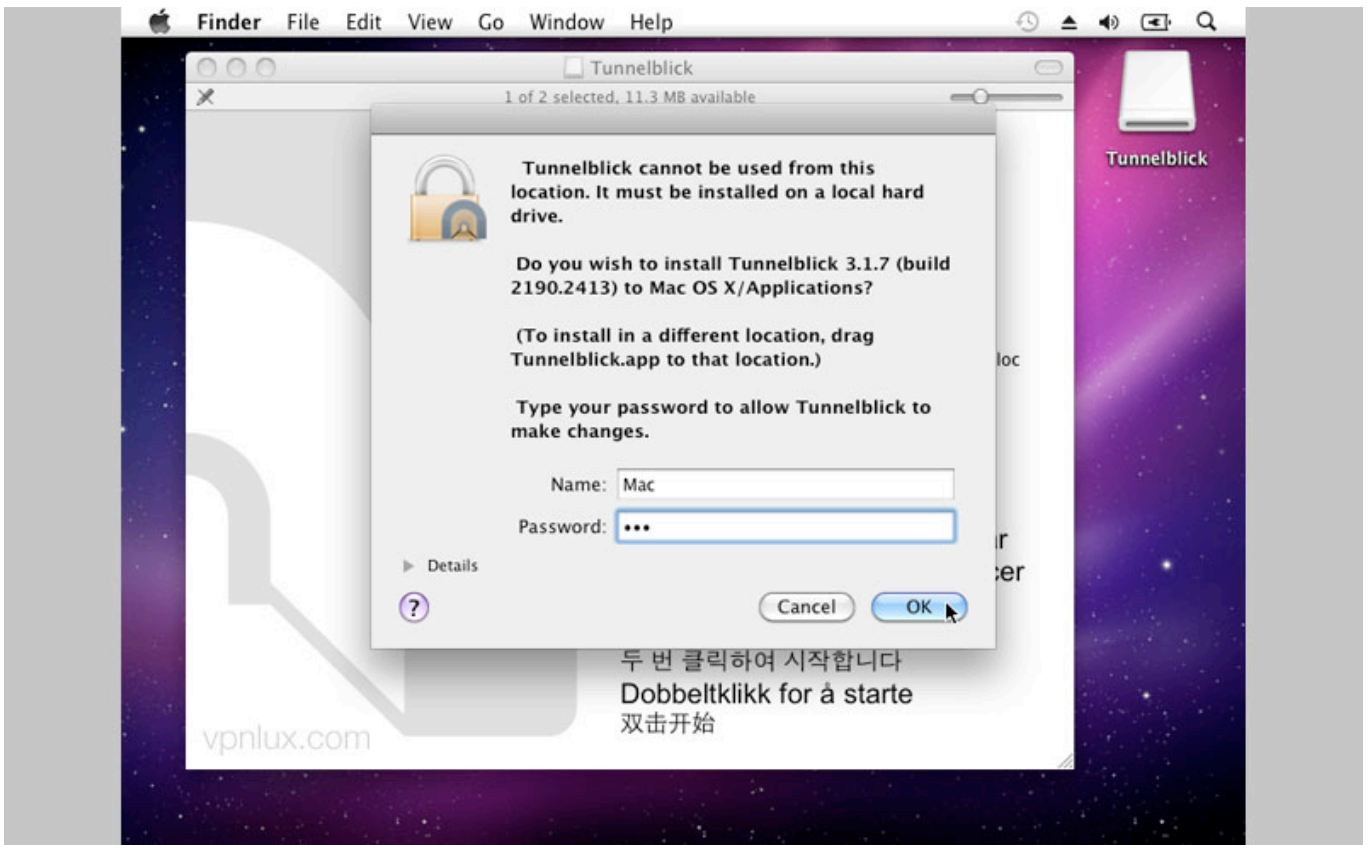

STEP 1. Download Tunnelblick from <http://code.google.com/p/tunnelblick/> and open the container. Double click on the application icon

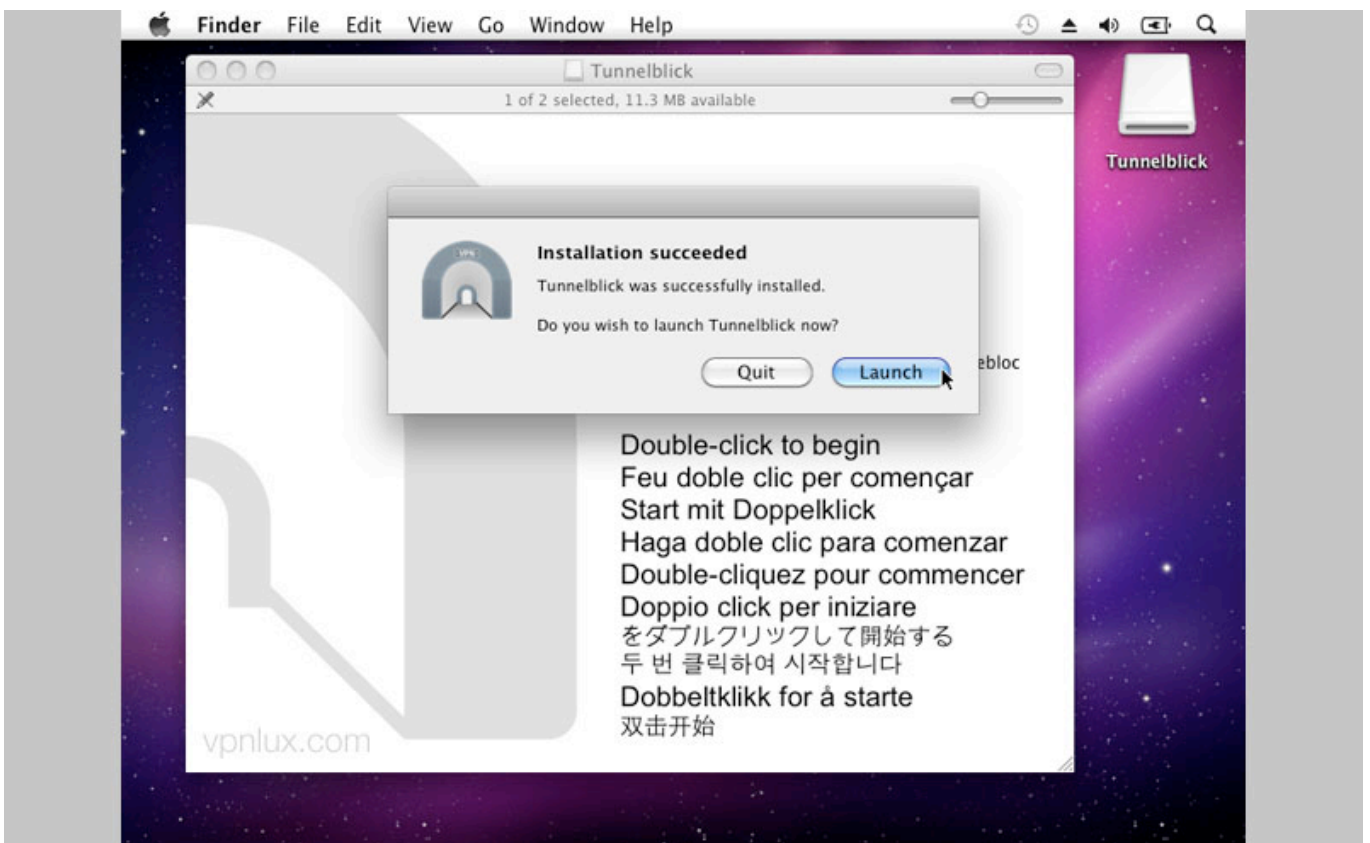

STEP 2. Click **Open**

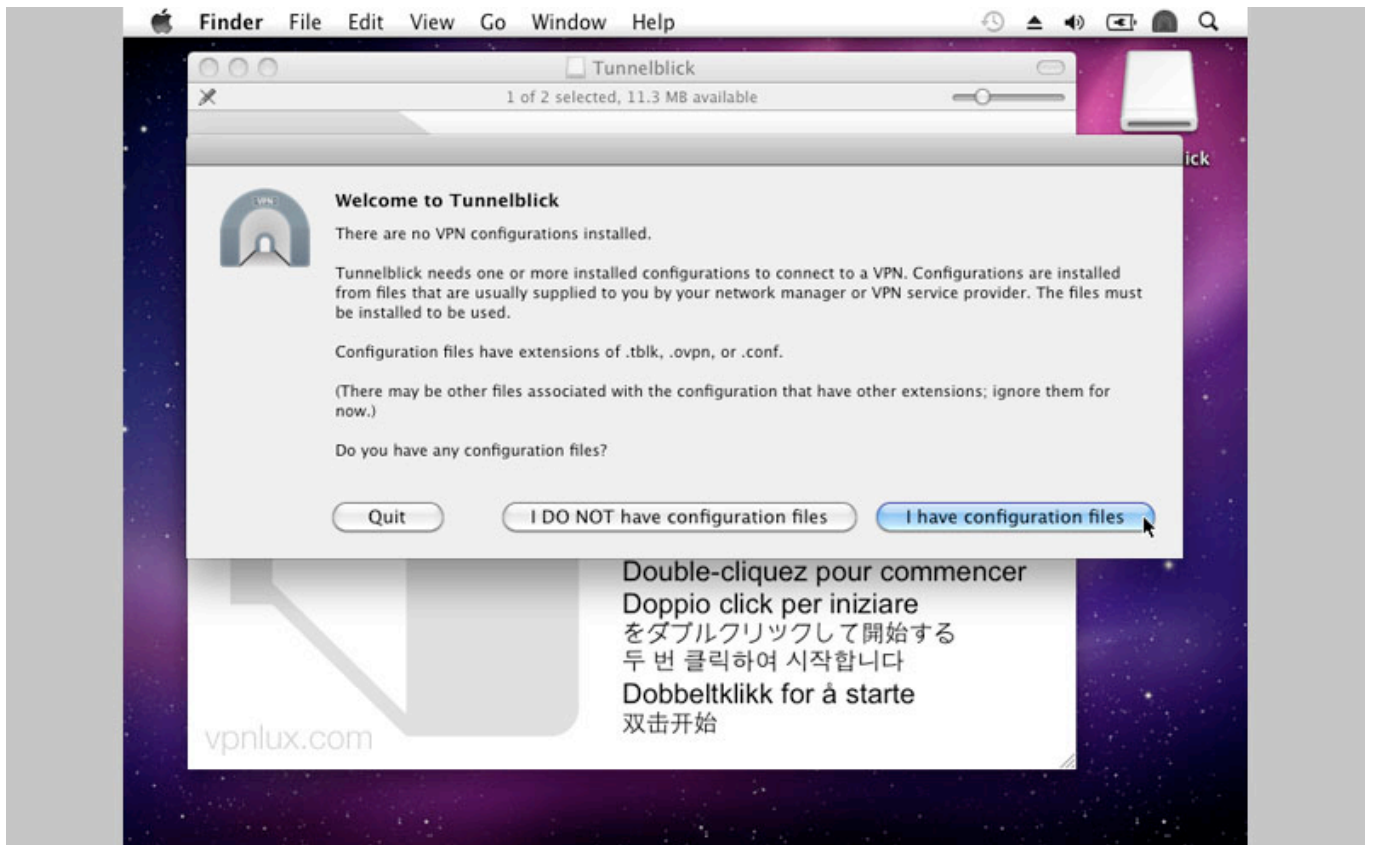

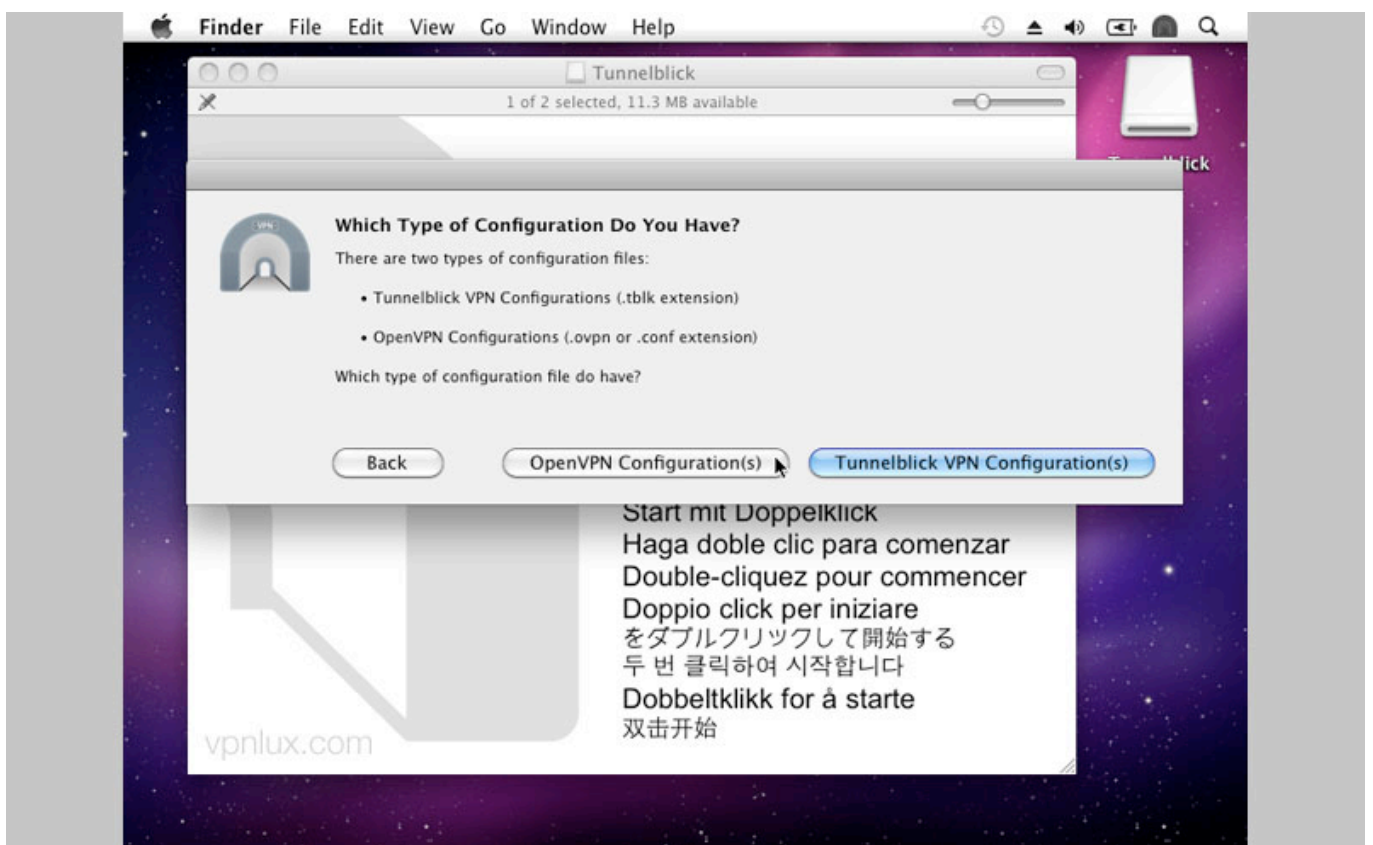

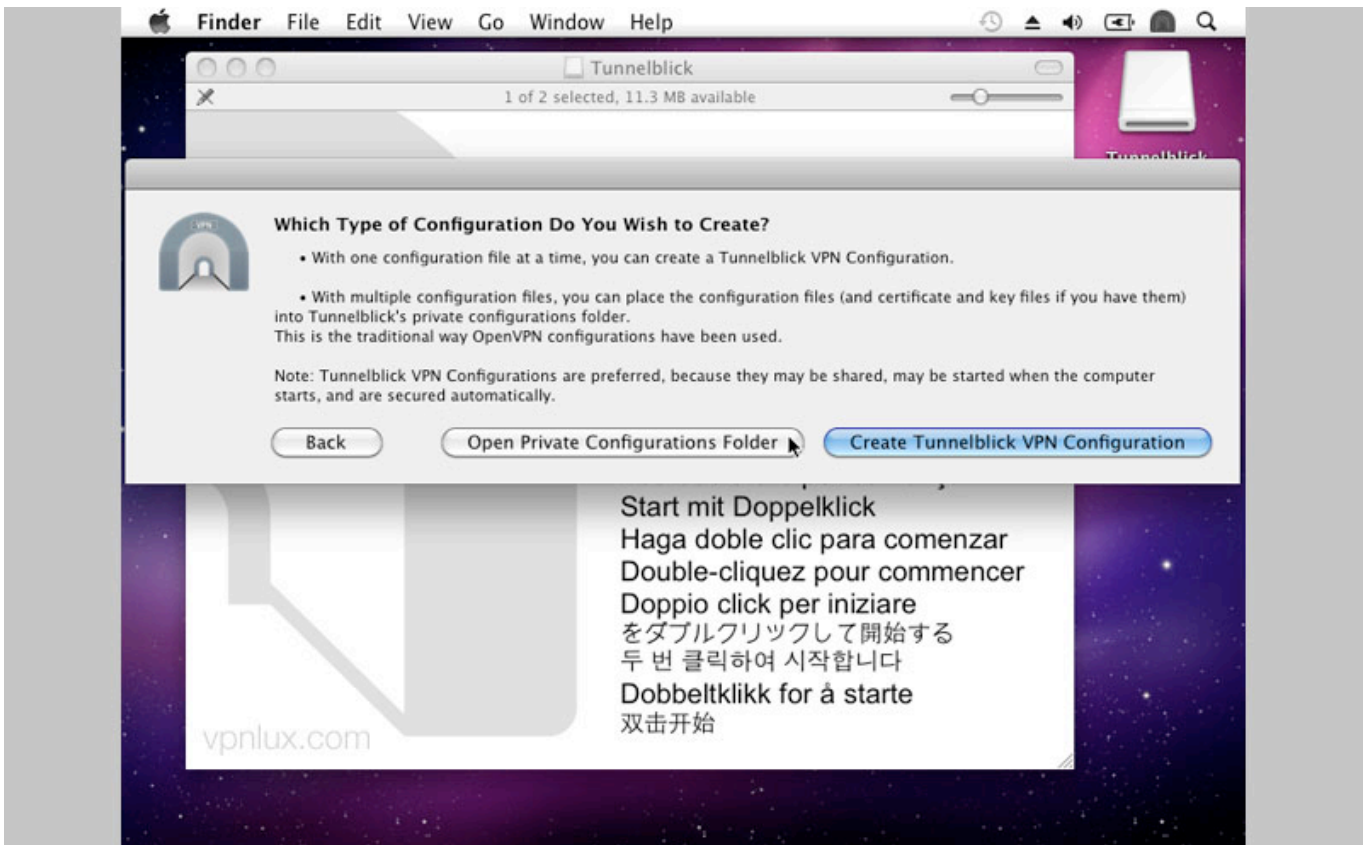

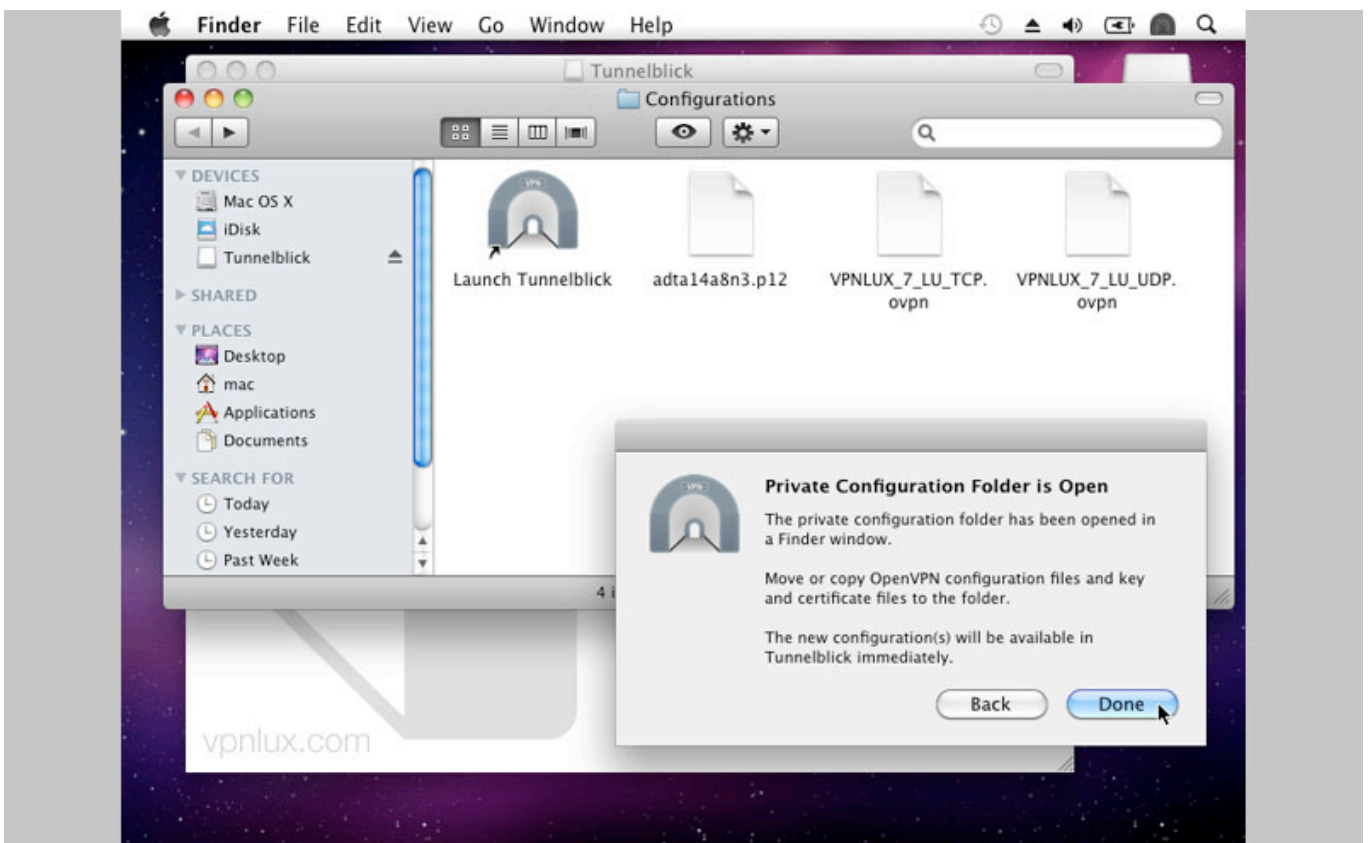

STEP 3. Enter your Mac OS password and hit **OK**

STEP 4. Click **Launch** after successful installation

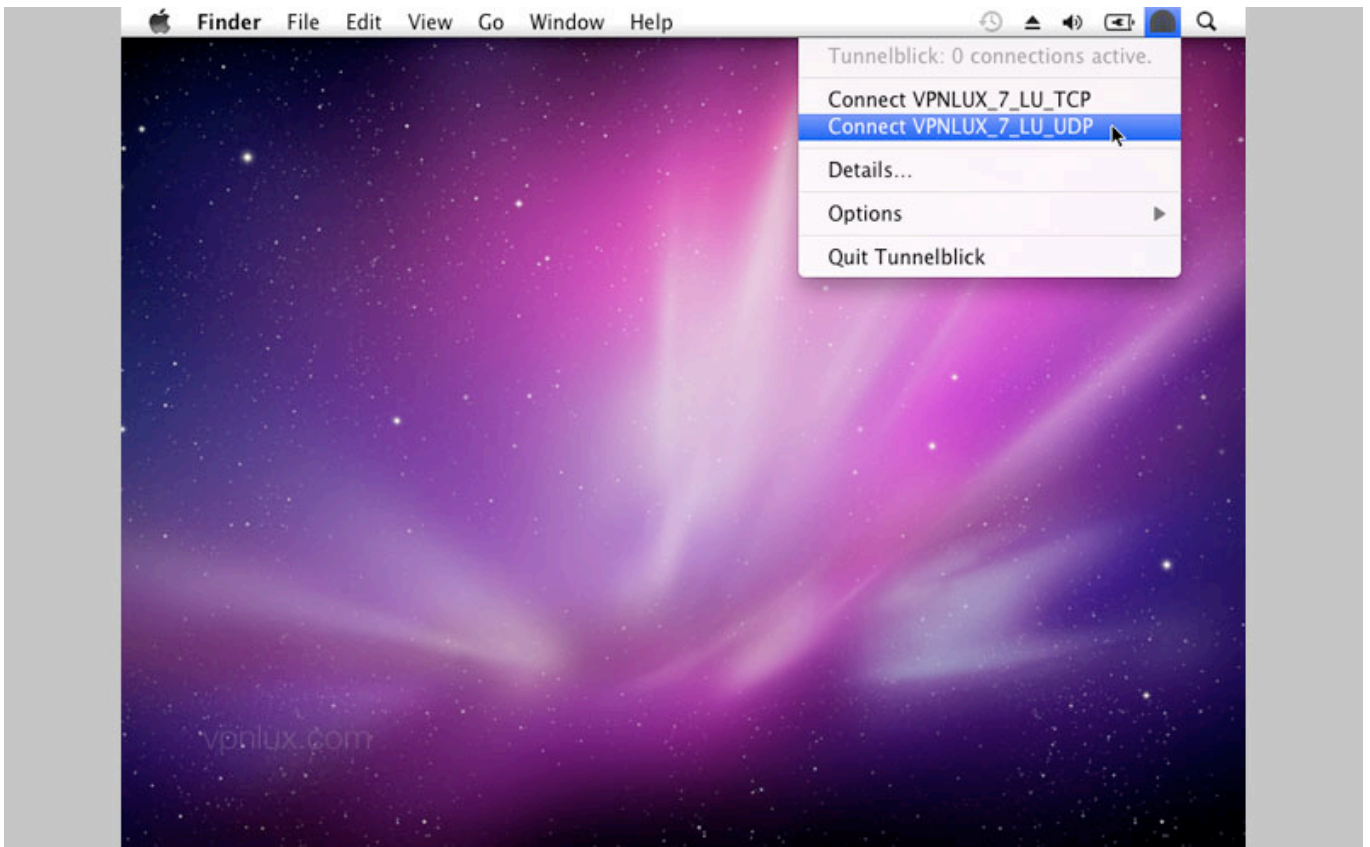

STEP 5. Click **I have configuration files**STEP 6. Click **OpenVPN Configuration(s)**

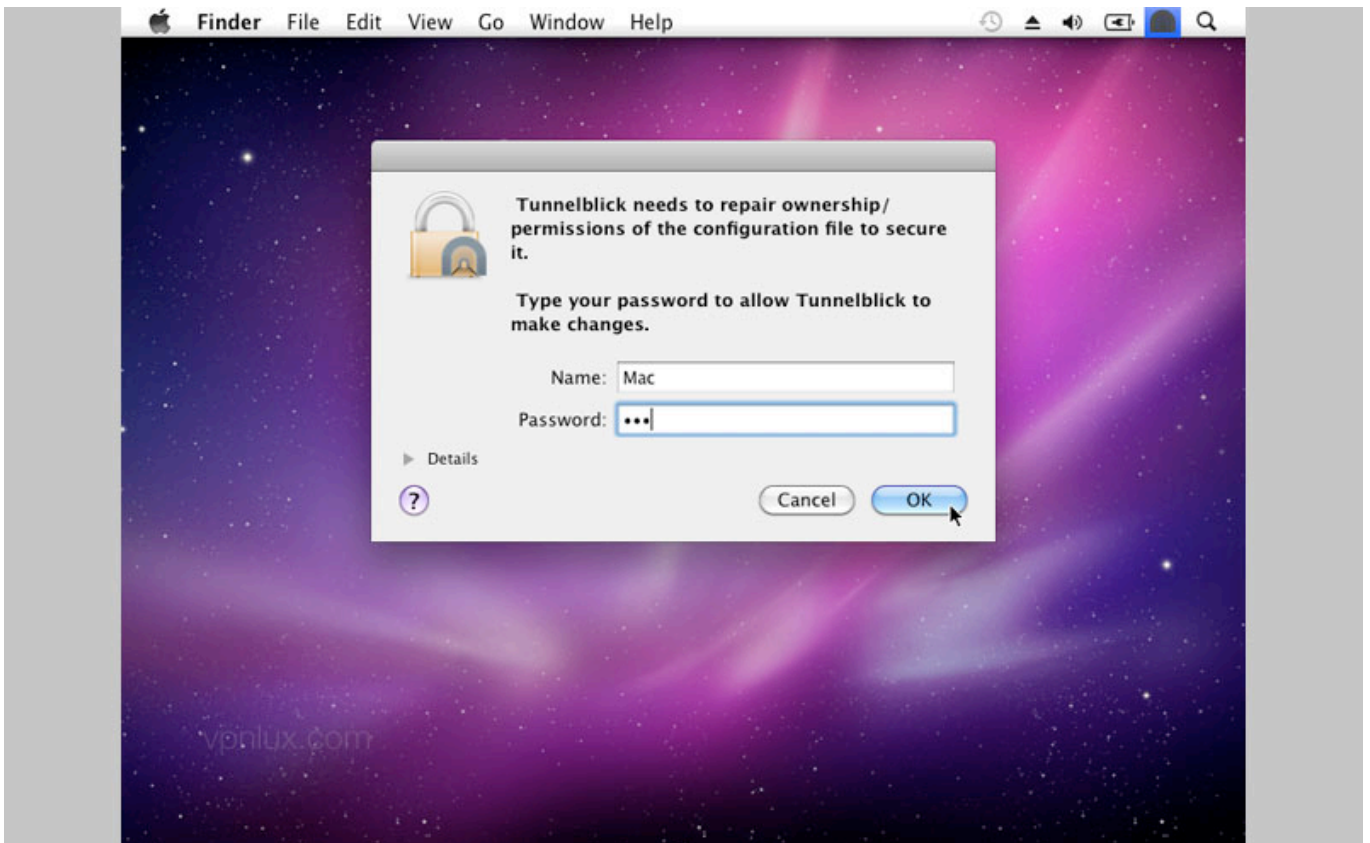

STEP 7. Click **Open Private Configurations Folder**STEP 8. Move Configuration files (look mac configuration link in control panel) into opened folder and click **Done**

STEP 9. Click on the Tunnelblick icon in menu bar and select your connection name with **Connect** prefix.

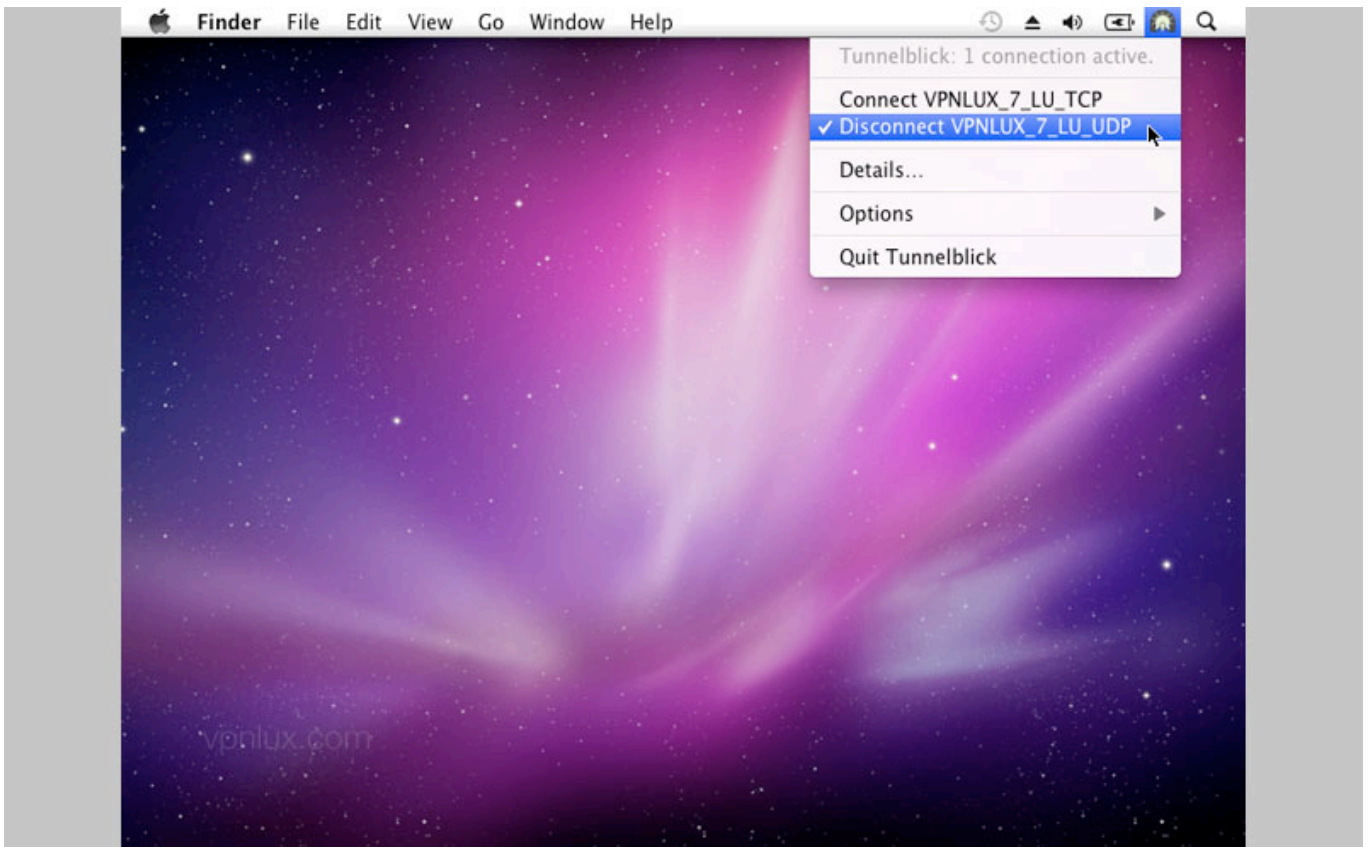

**NB!** First of all we recommend using a UDP connection, if it is stable, otherwise, use TCP

STEP 10. Enter your Mac OS password

STEP 11. Click on the Tunnelblick icon in menu bar and select your connection name with **Disconnect** prefix, when you finish

***NB!*** Never save configuration files on public computers! If someone connects with your details, you will be disconnected!

## DELETE VPN CONNECTION

STEP 1. Locate your Tunnelblick **Configurations folder** (default path: Library/Application Support/Tunnelblick), select vpnlux configuration files, right click and **Move to Trash**, and then **Empty Trash**
