

Setup OpenVPN on Mac OS with Viscosity

English version

How to Install Viscosity app

Step 1. Go to the [user dashboard](#) and select **Viscosity app for Mac OS 10.8 or later** in package configuration. Then click **Download** and save **Viscosity app** installer to the **Downloads** folder.

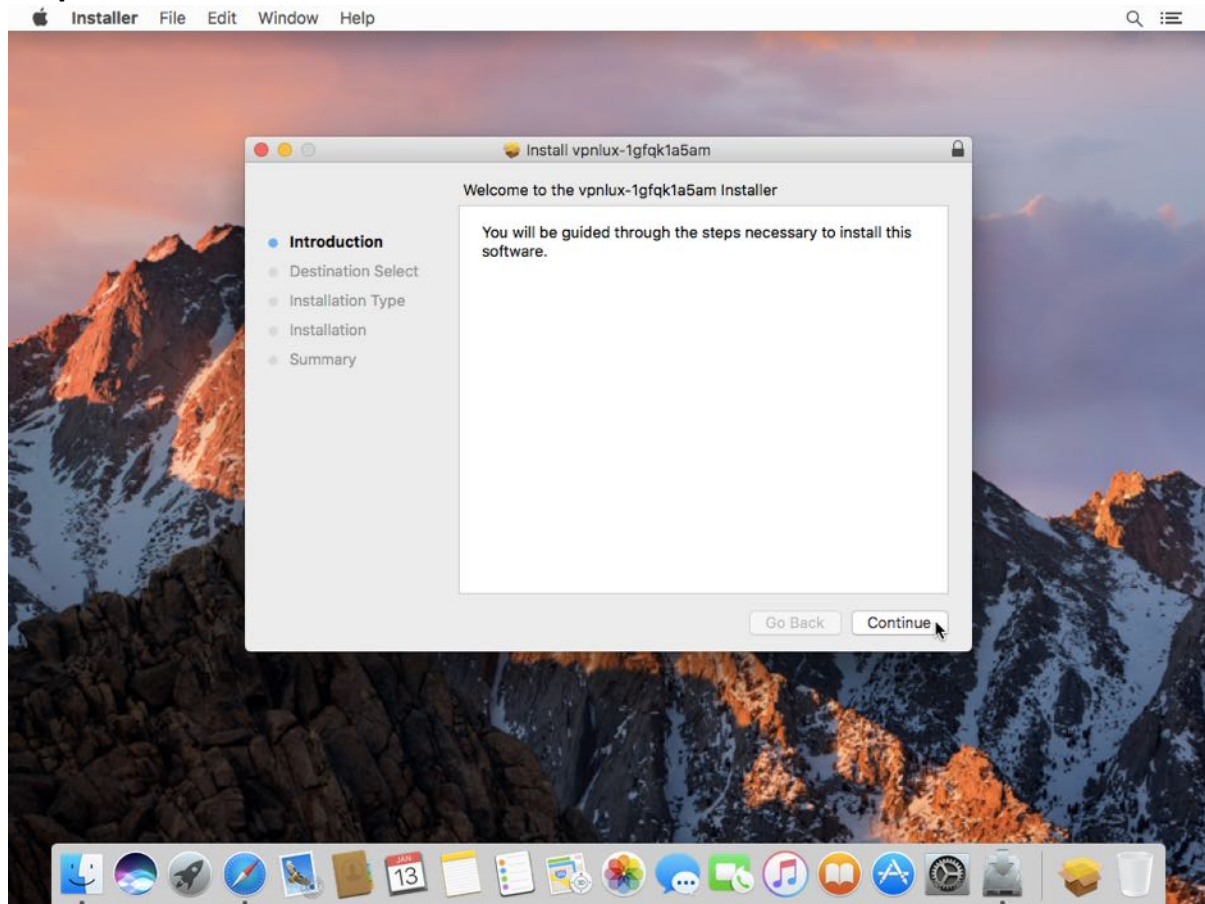

My packages

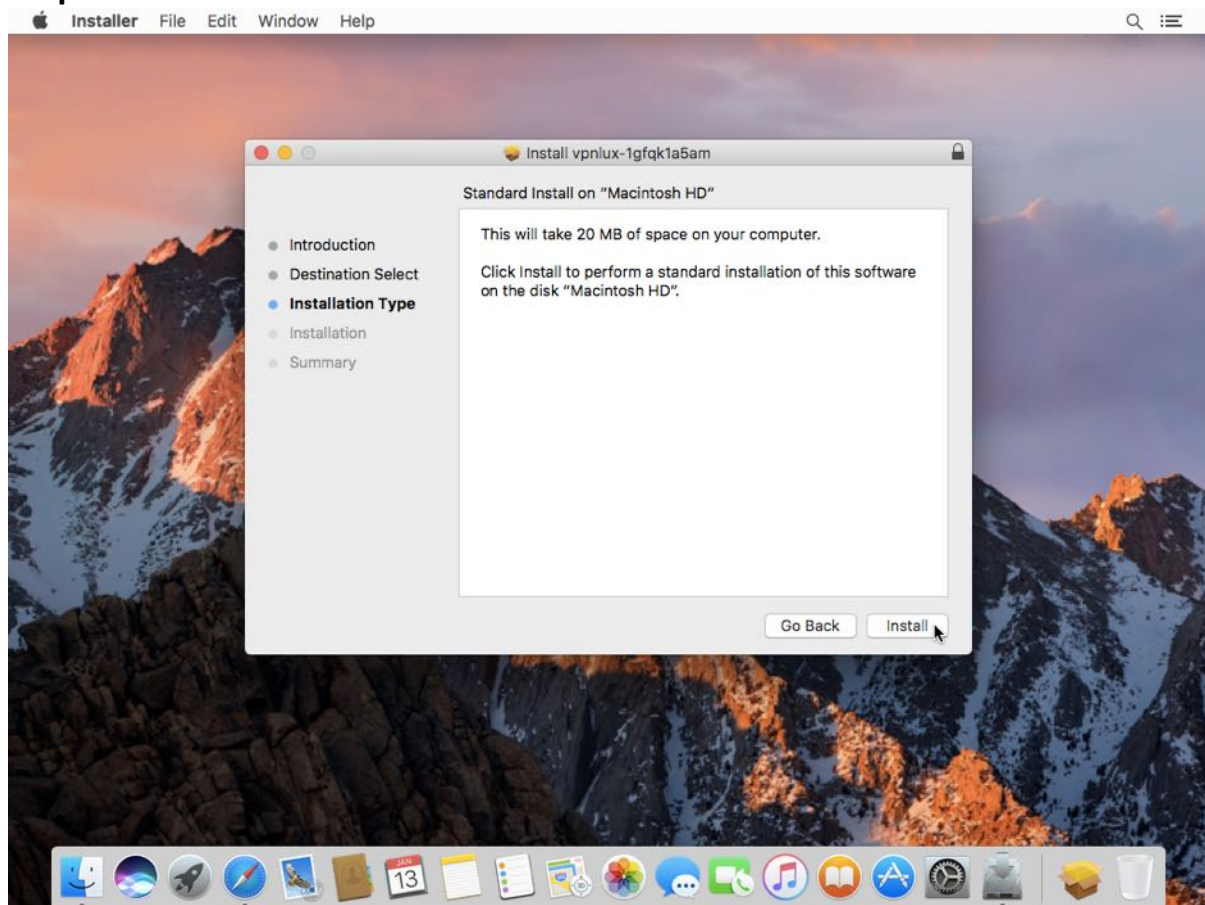

Step 2. Open the **Downloads** folder from the **Dock** panel and launch **Viscosity app** installer.

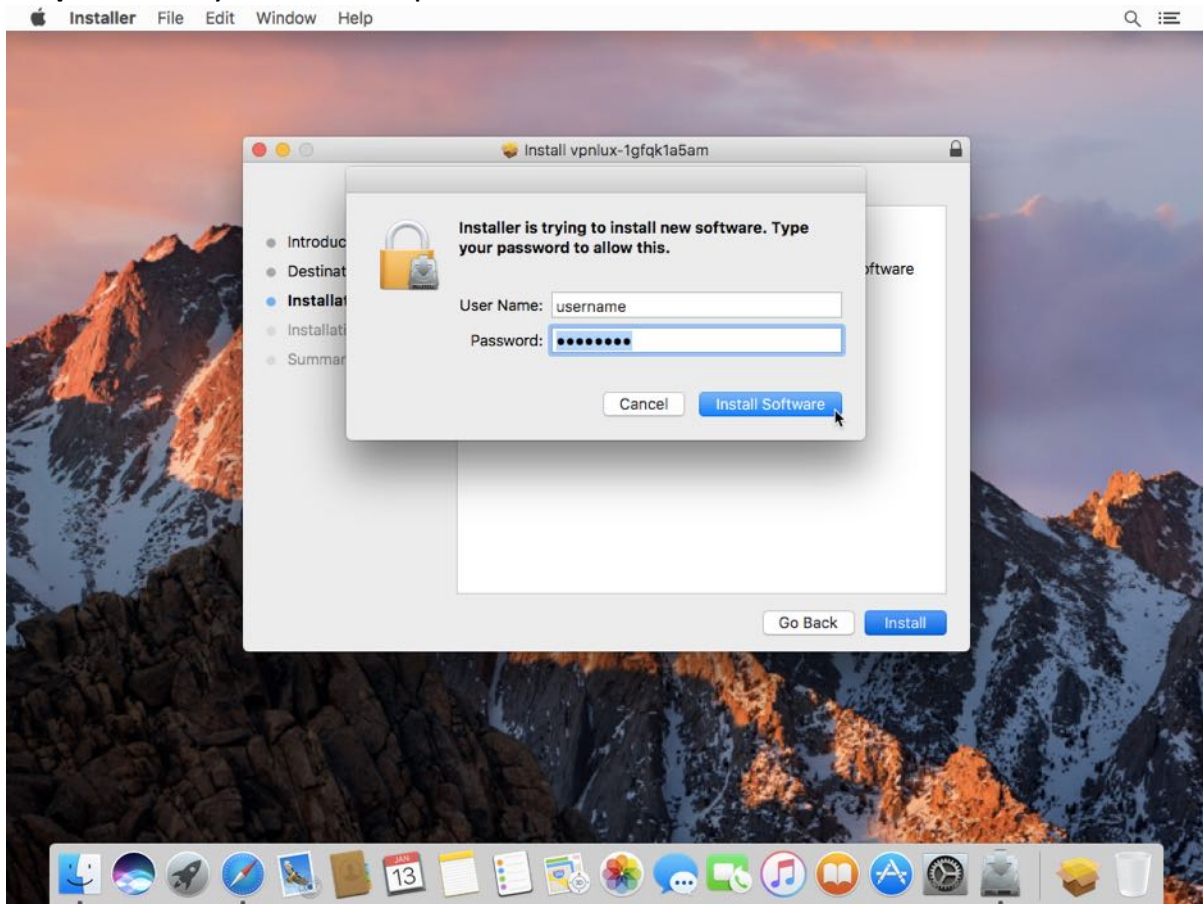

Step 3. Click Continue.

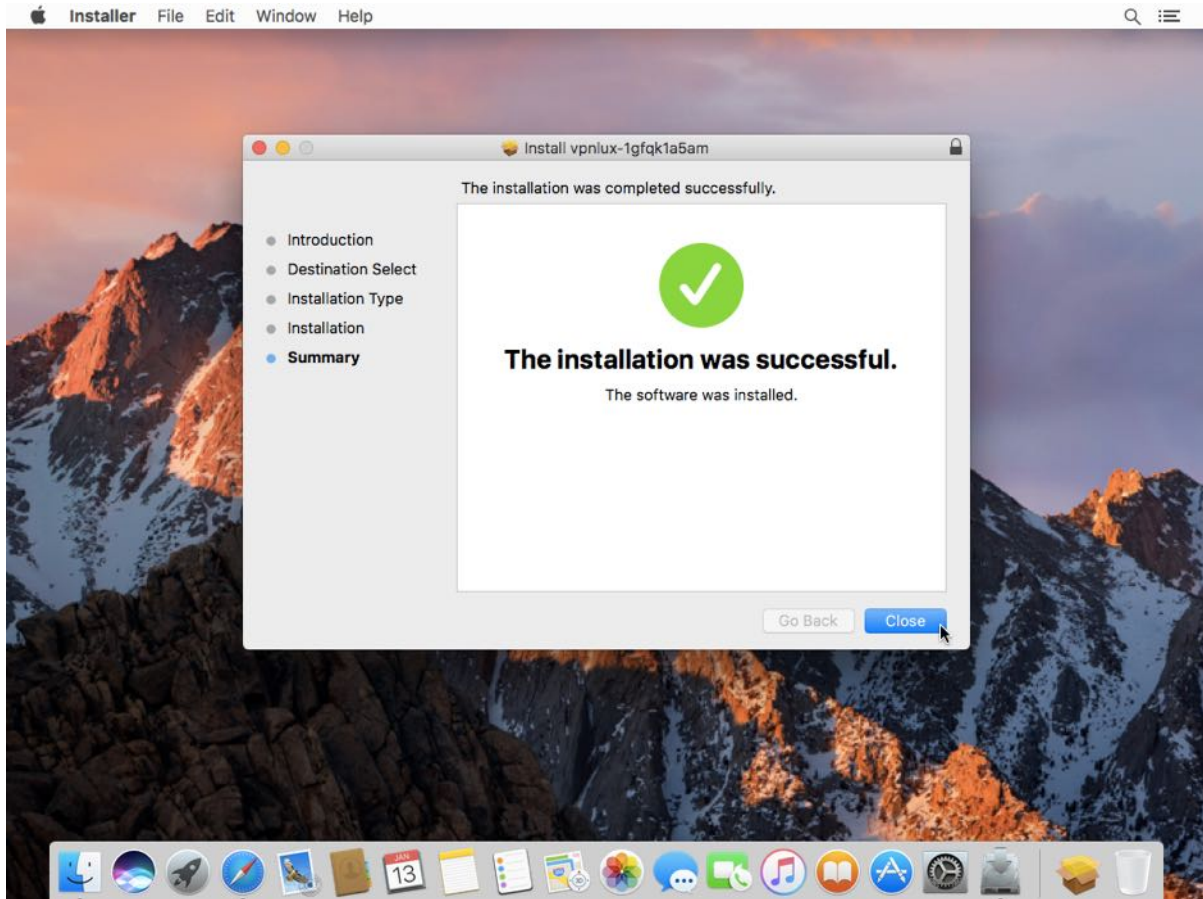

Step 4. Then click Install.

Step 5. Enter your Mac OS password and click **Install Software.**

Step 6. When you see the screen that says "The installation was successful**", click **Close**.**

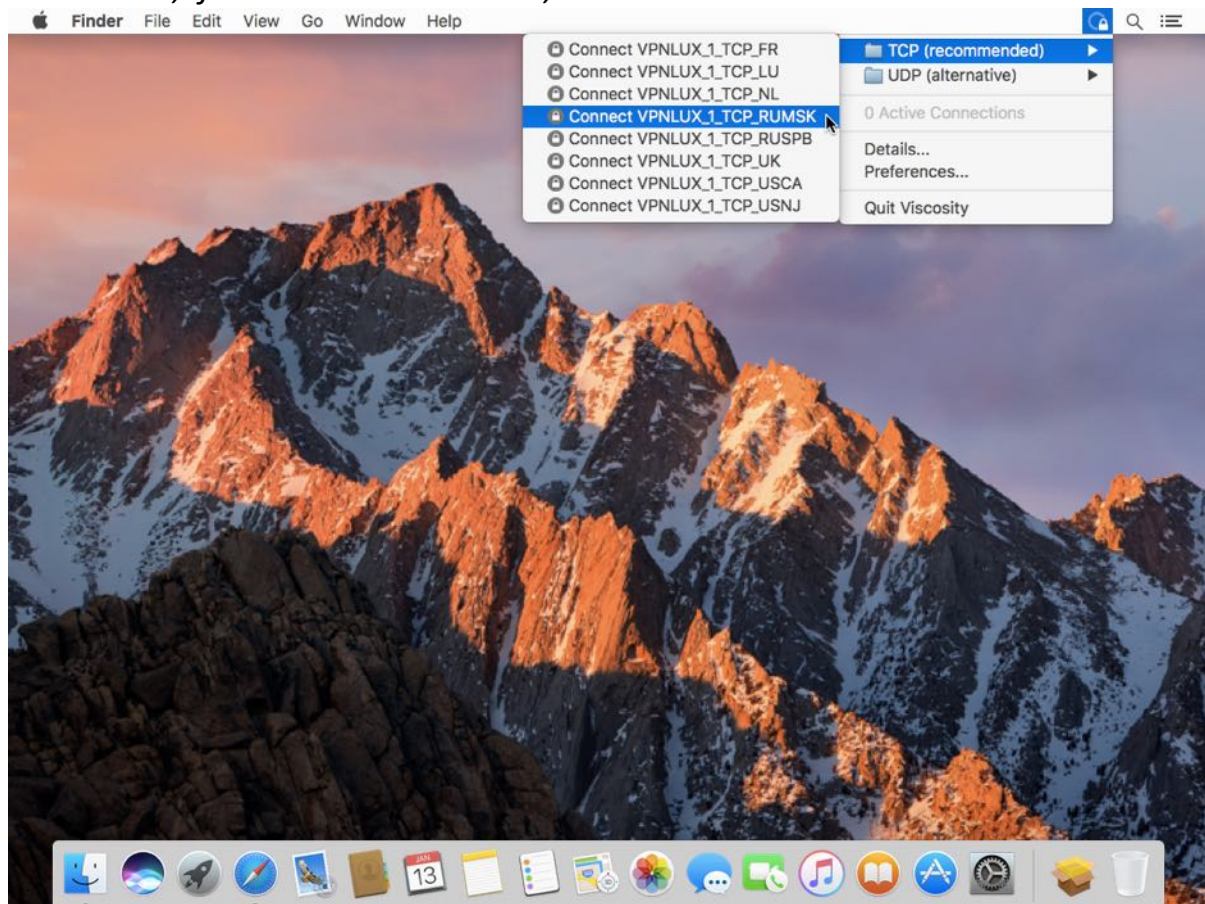

How to Connect to VPN

Step 1. Launch **Viscosity** app from **Launchpad** or **Applications** folder.

Step 2. Click the **Viscosity** icon in the **system tray** (top-right corner of the screen) and select the desired **location name**. **NB!** We recommend using **TCP** connection, if it is stable. Otherwise, use **UDP**.

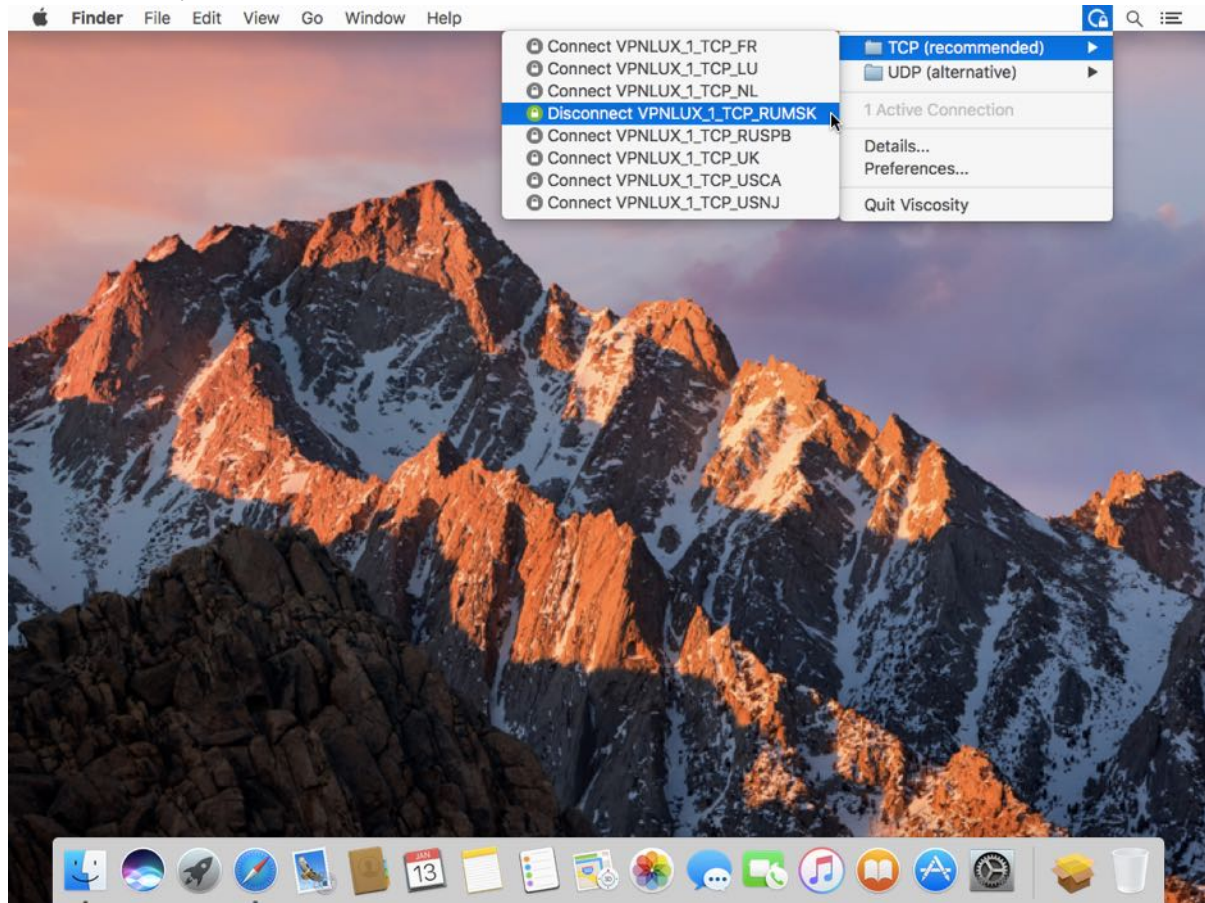

Step 3. You will see the following notification after the VPN connection is **established**. It is now safe to surf the web!

How to Disconnect from VPN

Step 1. Click the **Viscosity** icon in the **system tray**, hover over the **active connection**, then click to disconnect.

Step 2. You will see the following notification after the VPN connection is disconnected.
