Setup OpenVPN на Windows XP

English version

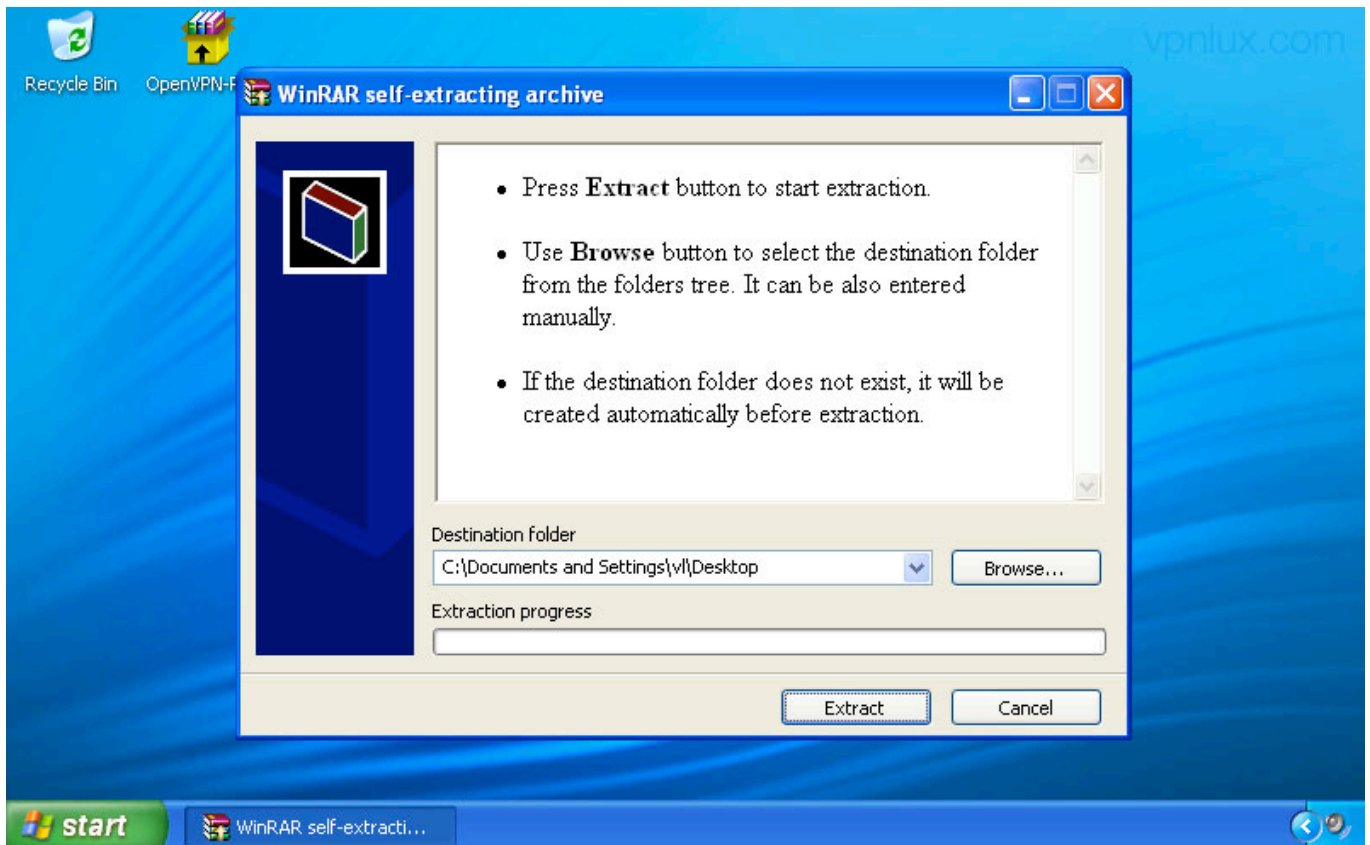

STEP 1. Run downloaded archive and click **Browse**

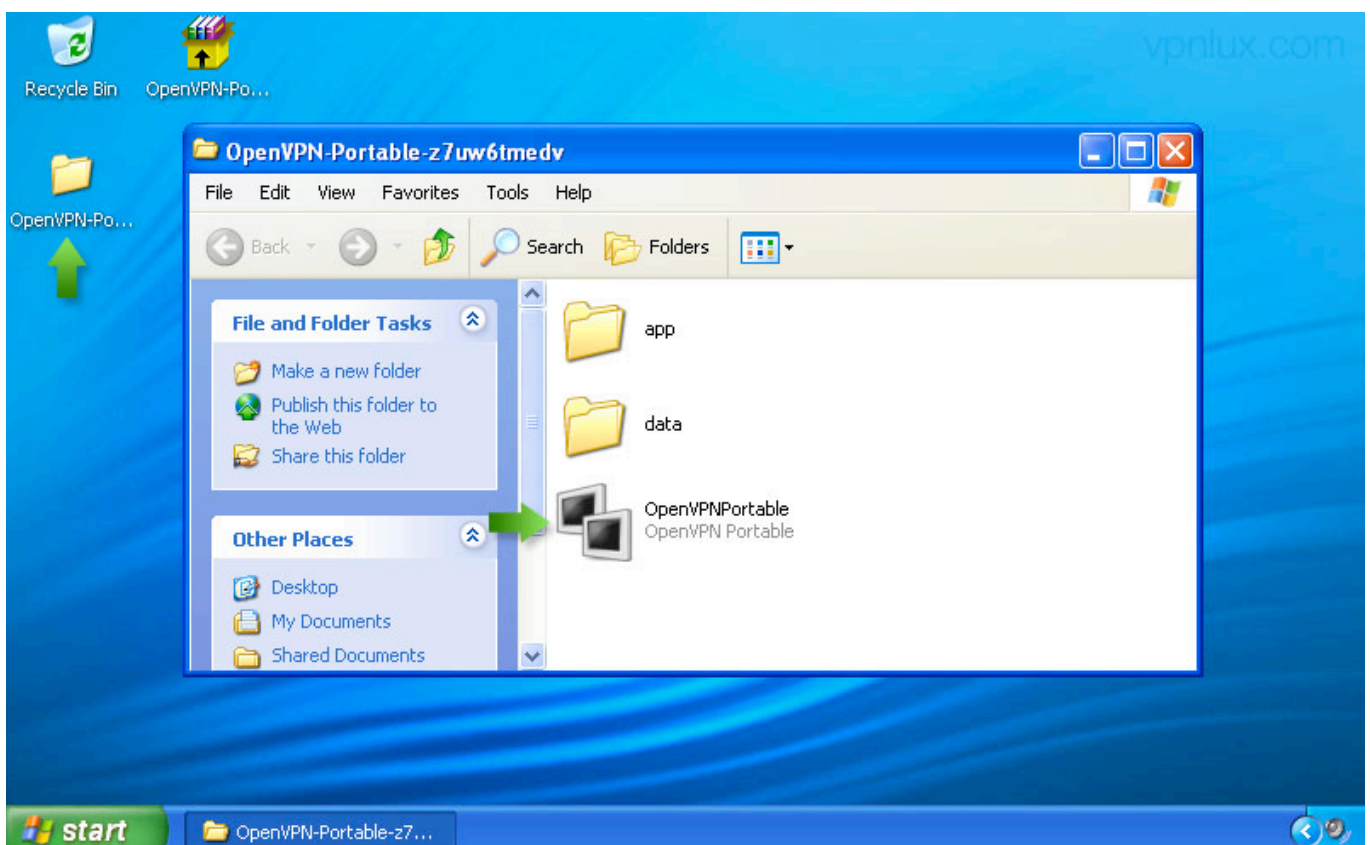

STEP 2. Select your desired installation path. It's portable application and can be run on a removable storage device. Hit **OK**

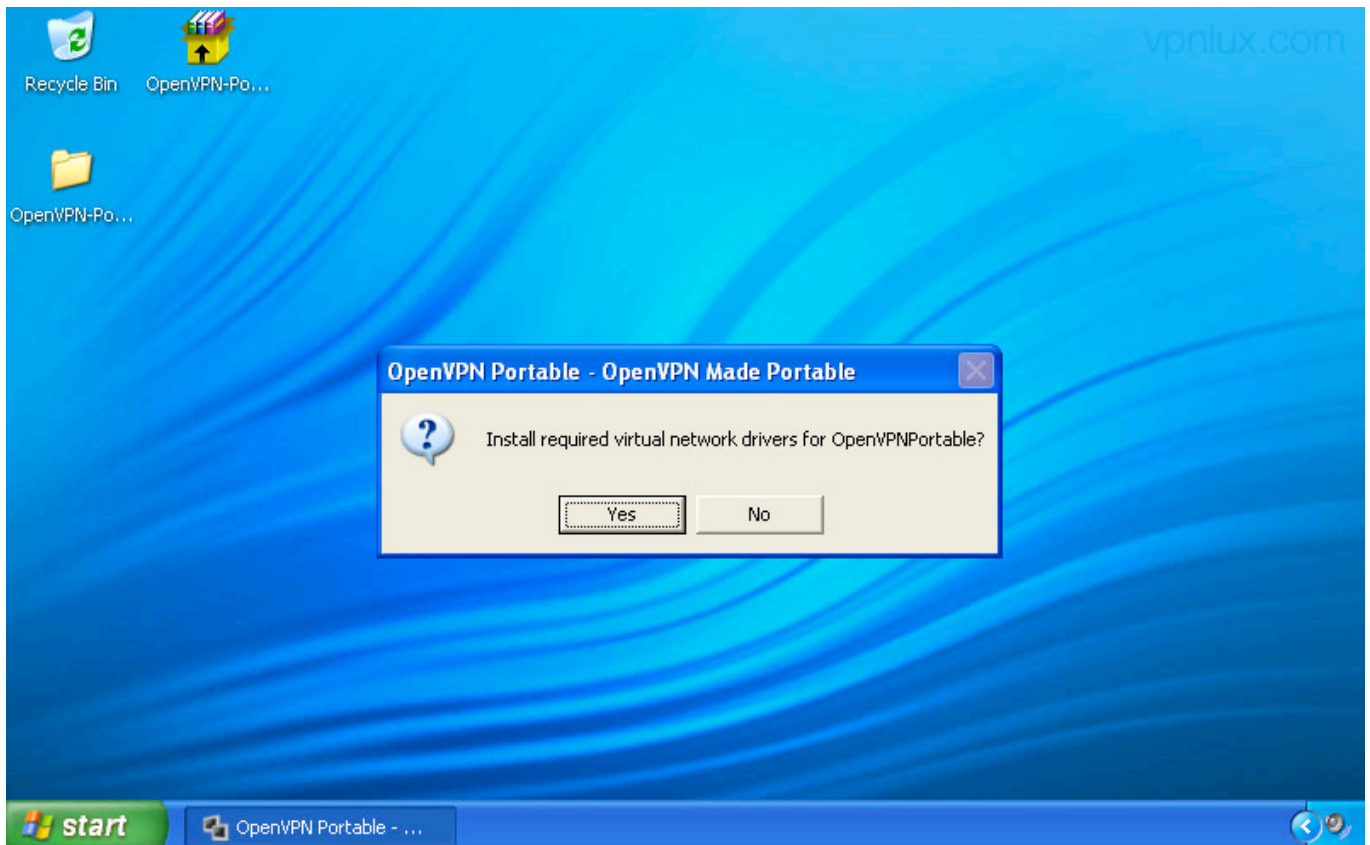

STEP 3. Click **Extract**

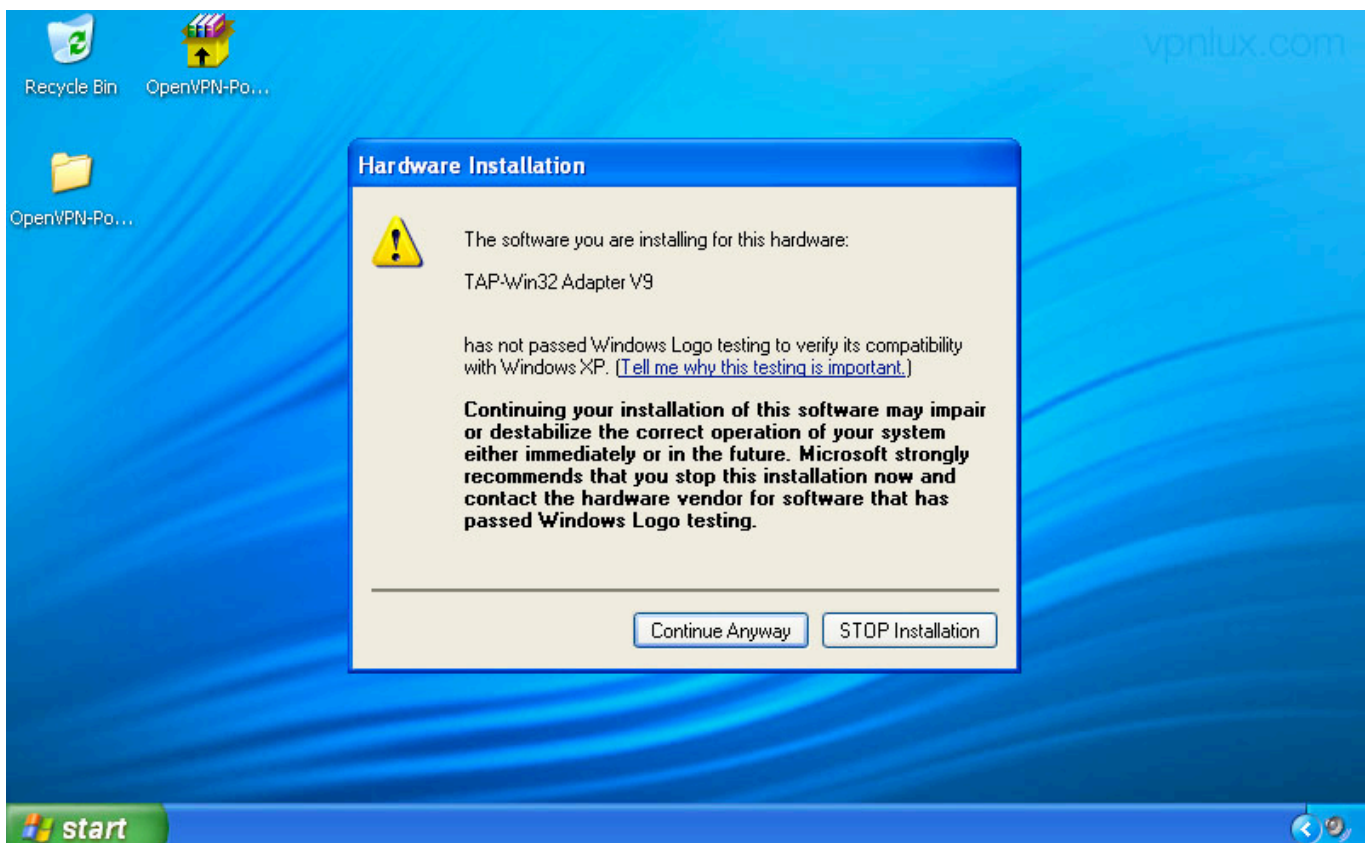

STEP 4. Open extracted folder and run **OpenVPNPortable.exe**

STEP 5. Click **Yes** to install Tap-driver

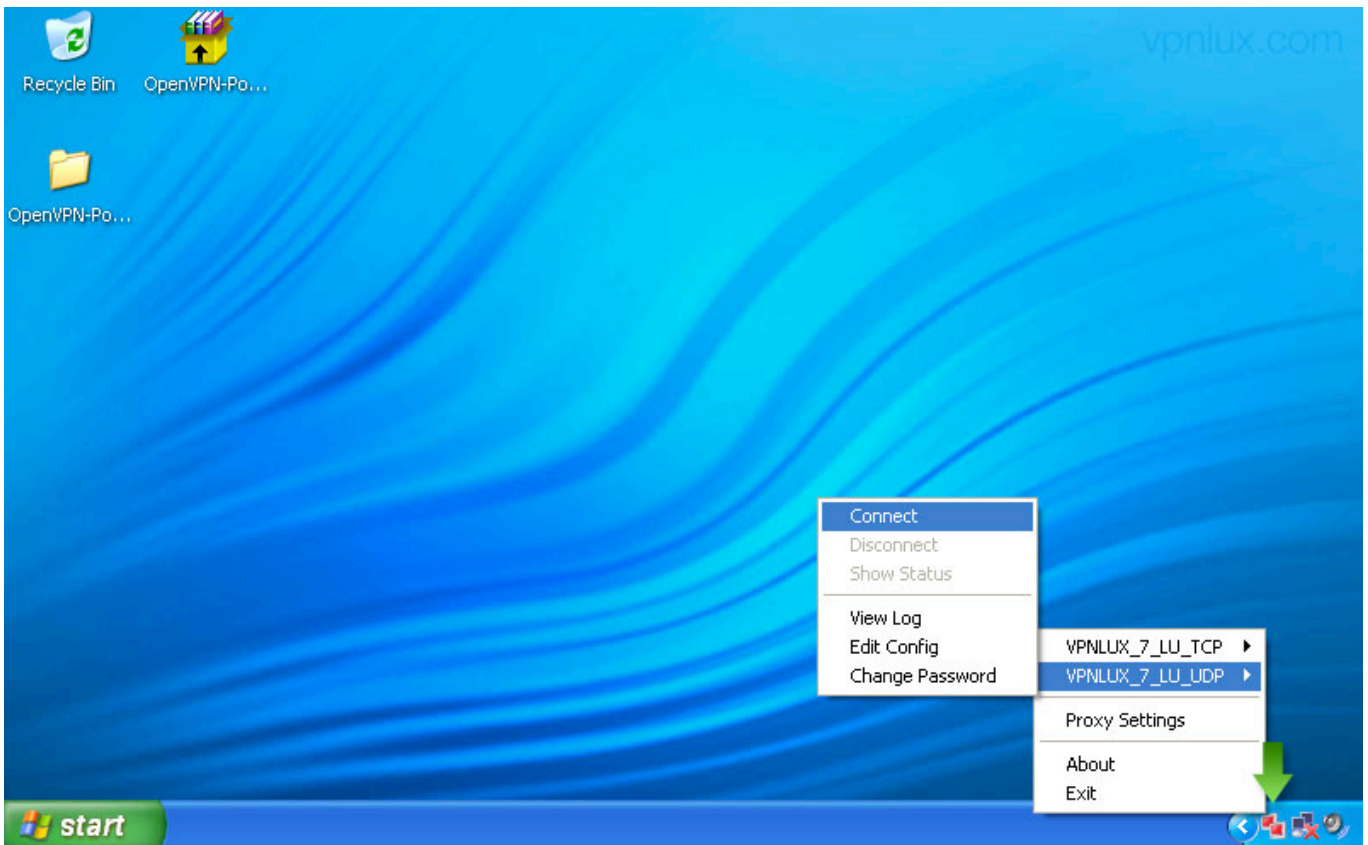

STEP 6. Click **Continue Anyway**

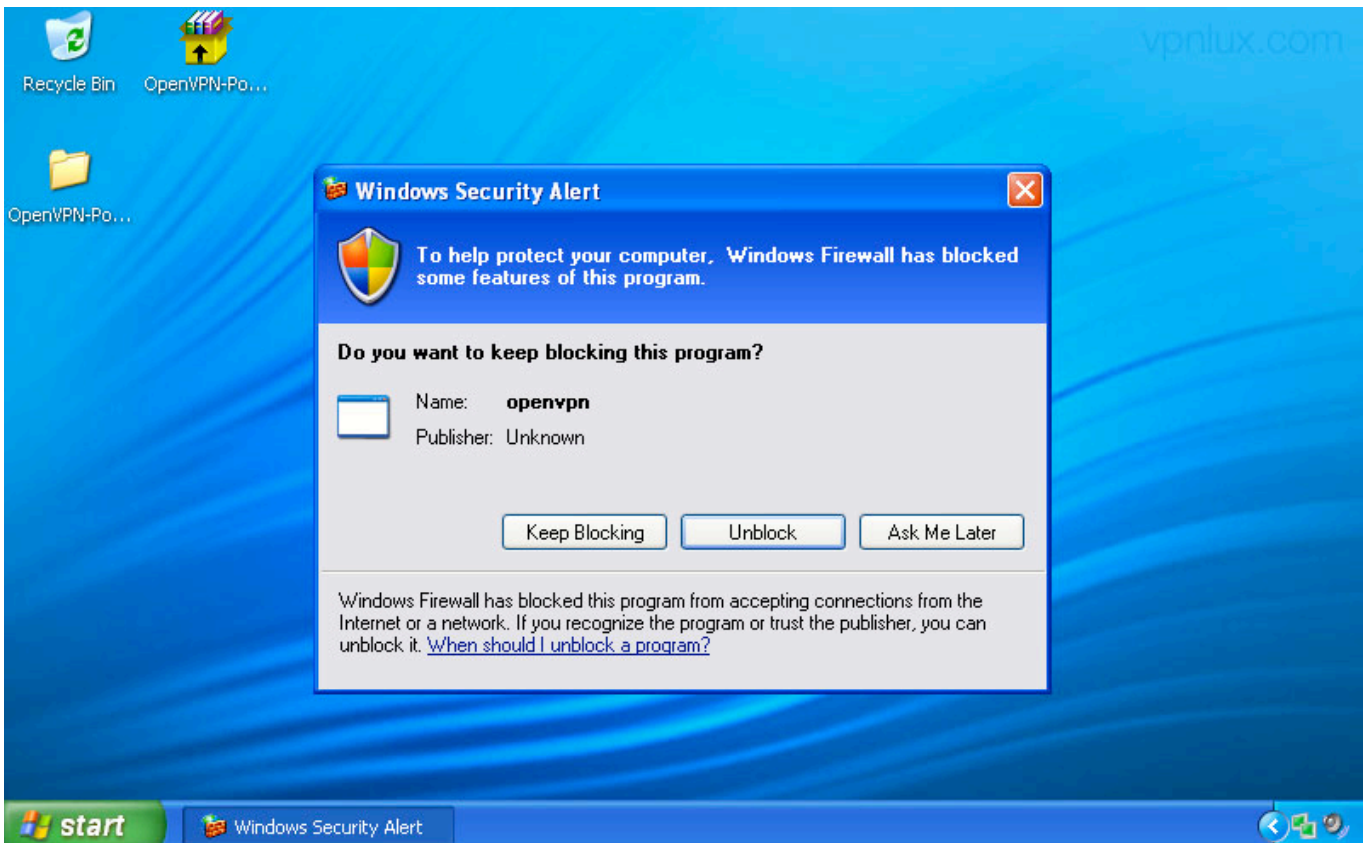

STEP 7. Right click on the OpenVPN icon in system tray, select your connection name and then **Connect**.

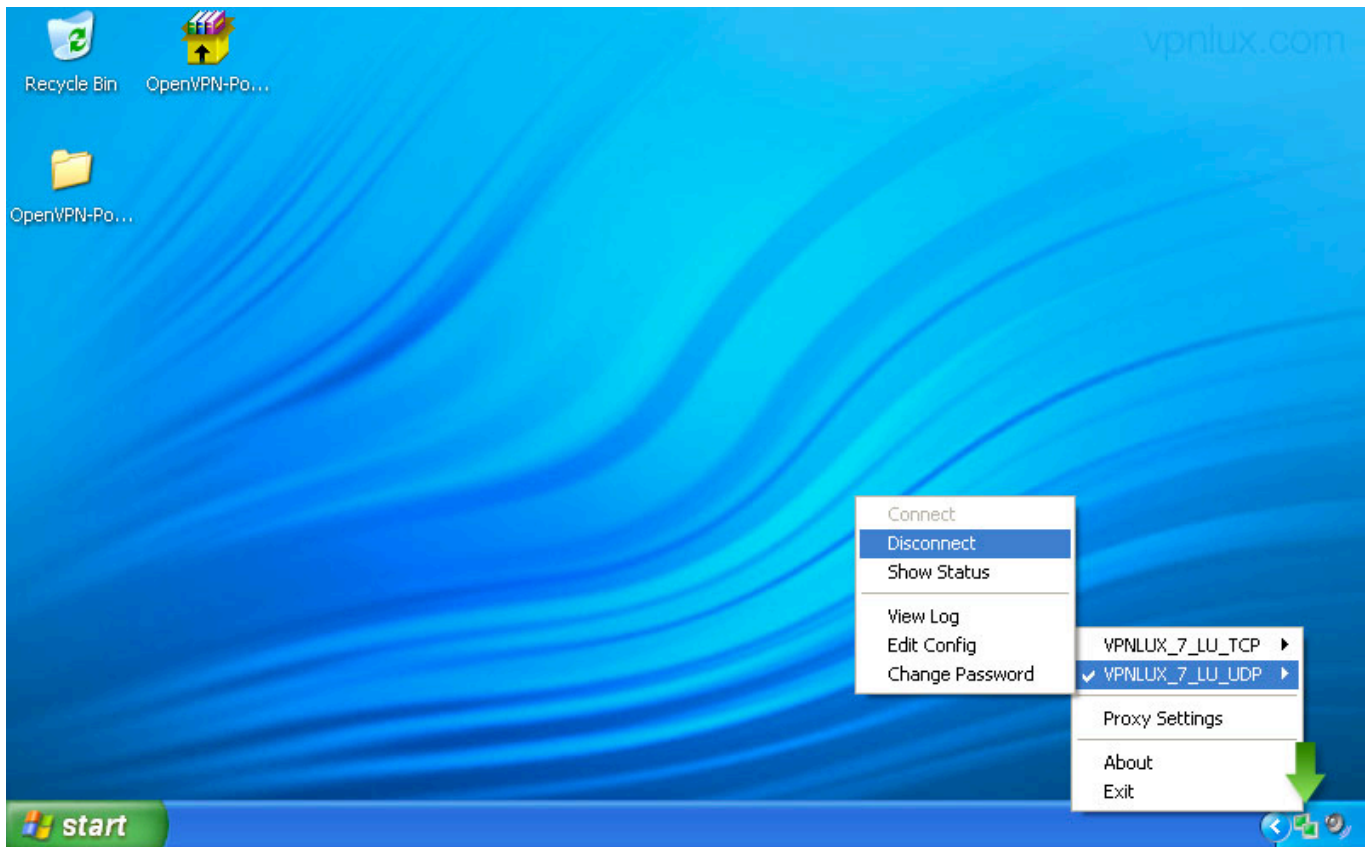

NB! First of all we recommend using a UDP connection, if it is stable, otherwise, use TCP

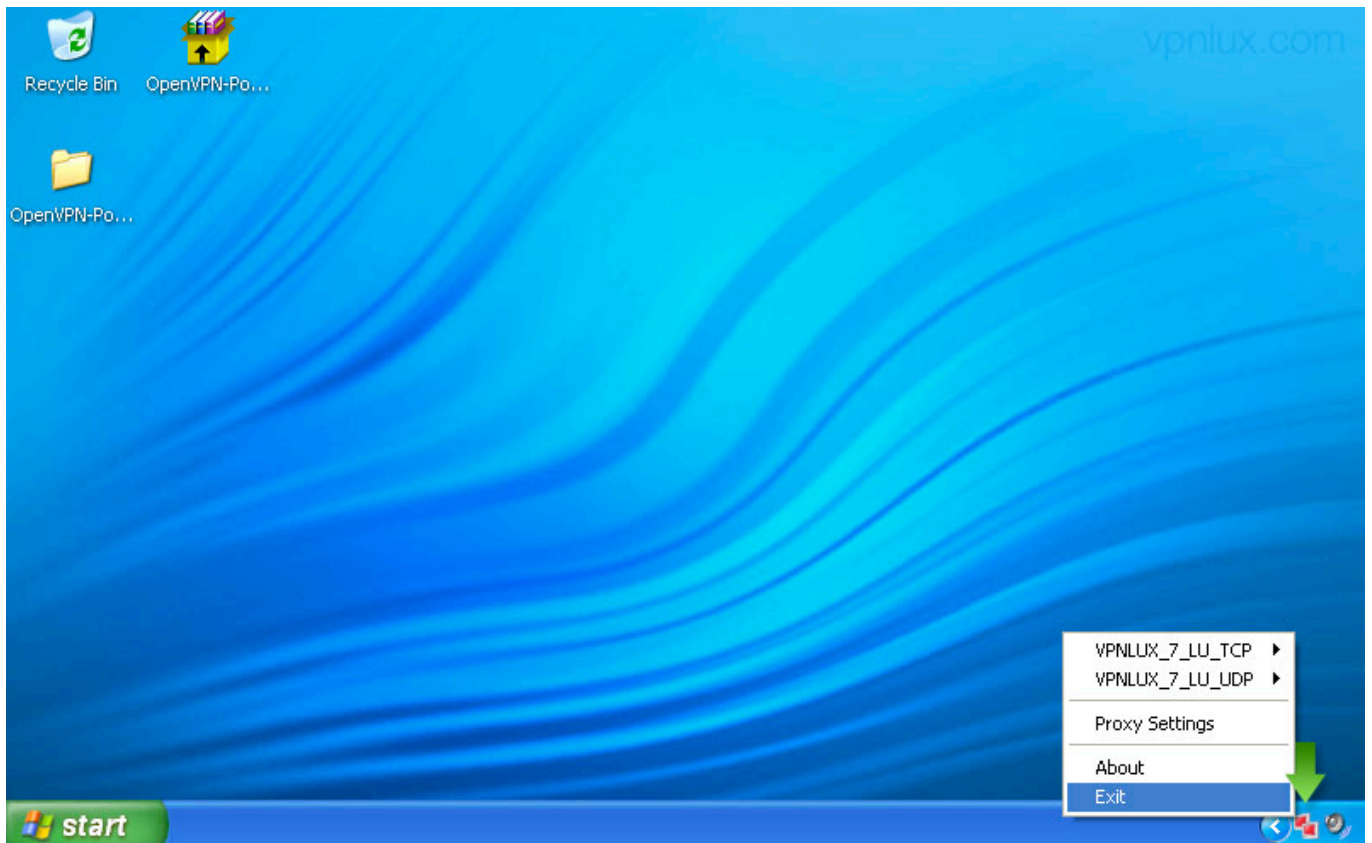

STEP 8. Click **Unblock**

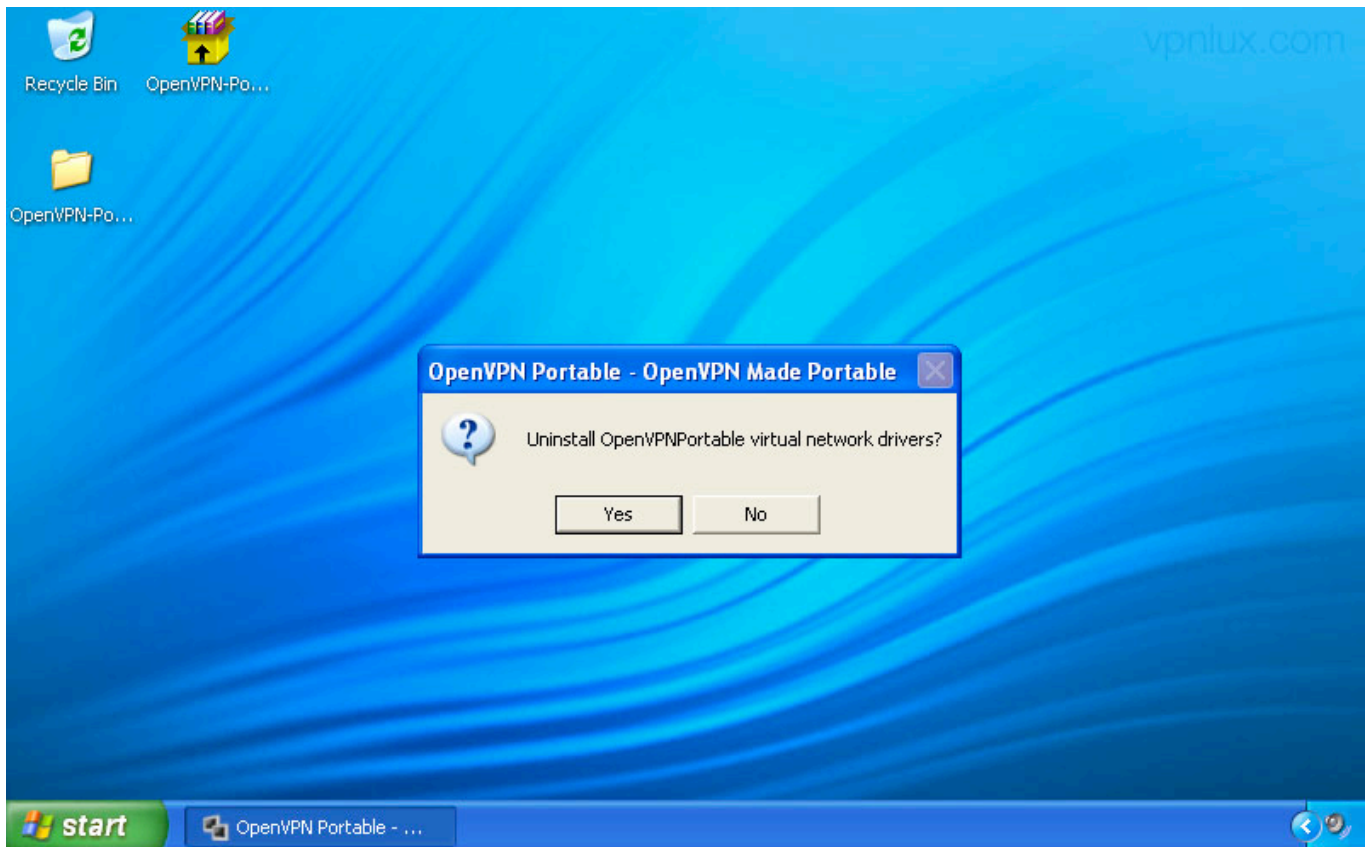

STEP 9. Right click on the OpenVPN icon in system tray, select your active connection and then **Disconnect** when you finish

STEP 10. Right click on the OpenVPN icon in system tray and click **Exit**

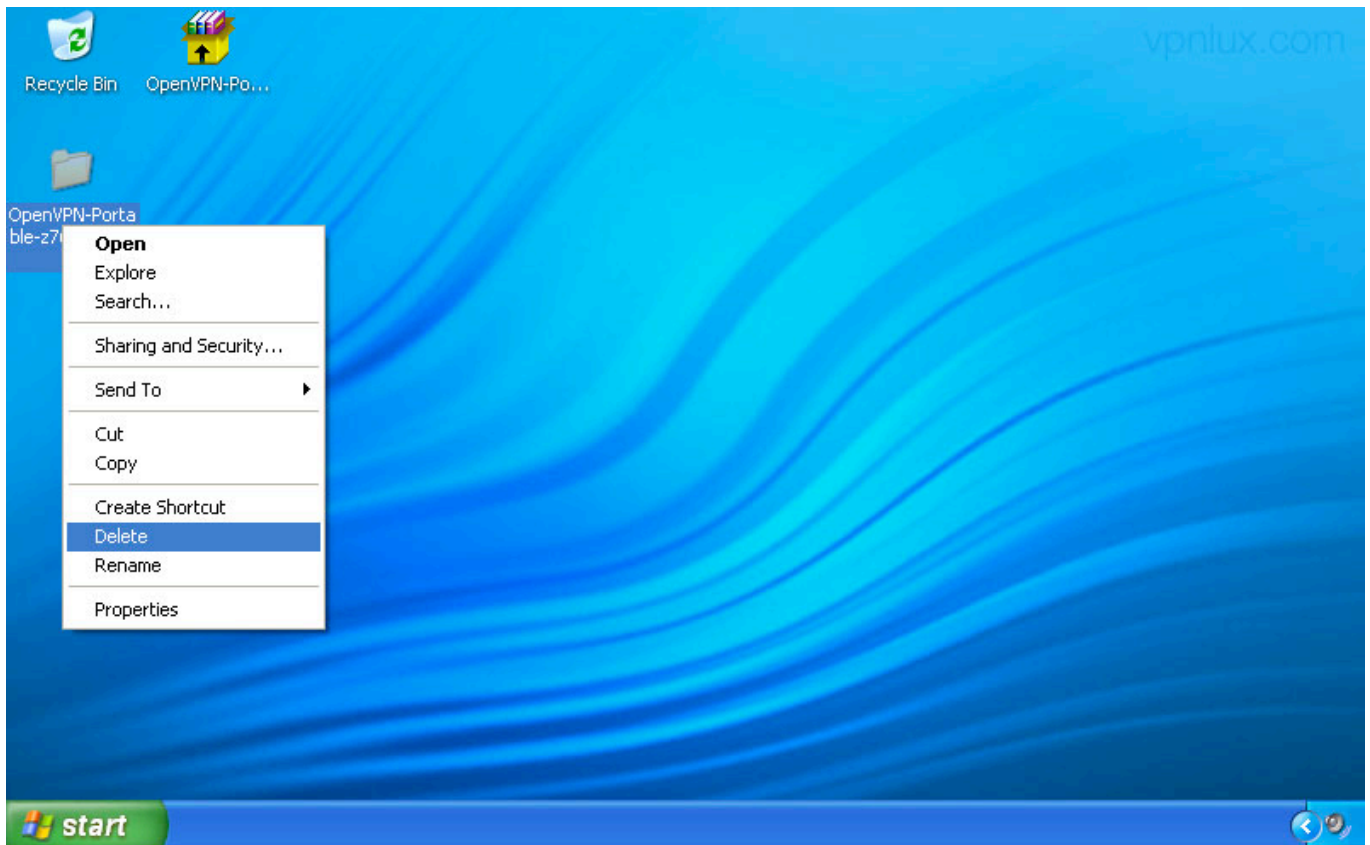

STEP 11. Click **Yes** to delete the tap-driver (the driver will be reinstalled the next time), or click **No** to leave the driver installed

NB! Never save a program or configuration files on public computers! If someone connects with your details, you will be disconnected!

UNINSTALL

STEP 1. Uninstall the driver when exiting the program (STEP 11). Select program folder and press **Shift +Delete** or right click on the program folder and select **Delete**

STEP 2. Confirm deletion and **Empty Recycle Bin**
